

ARE ELECTRIC CARS COAL-POWERED CARS?

- More than 60% of Denver's Electricity is currently generated by Fossil Fuels
- Over 60% of energy is lost during conversion to electricity
- Electric cars on average weigh more than their conventional-car equivalents, sharply reducing their fuel efficiency

Electricity generated by fossil-fuels releases harmful pollutants into the air, such as CO₂ and SO₂, a precursor to ozone pollution.

For these reasons and more, electric vehicles are not remotely as fuel-efficient as advertised.
